Software Earnings Joins Celerit for Merchant Capture Technology *- Core processor offers Software Earnings' First Touch iCapture to community banks -*

MEMPHIS, Tenn., Aug. 18, 2008 - [Software Earnings](#), a leading developer of [check and image processing technologies and services](#) for the financial industry, announced Little Rock, Ark.-based [Celerit Solutions](#), a provider of core processing, item processing and networking solutions to community banks, has been certified to provide Software Earnings' [First Touch iCapture](#) for merchants to community bank core processing customers.

Through the partnership, Celerit will host First Touch iCapture in its data center and oversee all back office processing. As a result, Celerit can offer community banks around the state easy and cost-effective access to merchant capture technology. First Touch iCapture, which offers distinct benefits to the banks and business customers, can support any size community banks with any number of inbound and outbound imaged items.

"Changes in the payments landscape have made merchant capture an important service for business customers," said David Harrington, executive vice president for Celerit. "We have worked with Software Earnings, an industry leader of payments and image processing, to integrate First Touch iCapture into our core platform. As a result, our customers have access to a robust, cost-effective solution for merchant capture."

First Touch iCapture enables merchants to scan checks at their business regardless of location and transmit the images over a secure Internet connection to a bank for processing. Merchant capture eliminates courier costs, mitigates risk due to possible check mishandling and improves funds availability to customers. In addition to time and cost savings, merchant capture helps bank attract new customers without geographic restriction – an important opportunity as competition among financial institutions increases.

“First Touch iCapture is a simple-to-use remote deposit solution that is good for merchants *and* good for the banks that offer it,” said Trent Fleming, senior vice president, Strategic Market Development for Software Earnings. “The product’s functionality, combined with Celerit’s strong customer base and excellent reputation throughout the Mid-South, makes the partnership an undeniable benefit to community banks seeking stronger customer relationships and improved payments and image processing.”

The First Touch iCapture platform can be expanded to receive remote deposits from corporations and bank branches, input from lockbox and remittance documents and image cash letters from correspondent banks and exchange partners.
