Software Earnings Launches *Remote Remittance Capture*

New product provides an in-depth, feature-rich remittance payment system

MEMPHIS, Tenn., (November 30, 2011) — Software Earnings, Inc. has launched ***Remote Remittance Capture (RRC)***, a new ***Treasury Software Application*** that accepts check payments and remittance coupons over a secure, Web-based connection. Businesses and medical centers that receive customer checks with matching payment coupons can now accept and process these payments in their offices without going to the bank. The product also provides an electronic archive for managing customer deposits.

Remote Remittance Capture allows customers to scan payments with either a Digital Check® scanner or a Panini scanner. The solution is FFIEC-compliant with multi-factor authentication included in the login process. RRC allows each workstation to scan and read multiple types of coupons and choose custom output files. In addition to enhanced features, the solution includes product training and 24/7 customer support.

“Financial institutions of all sizes will greatly benefit from Remote Remittance Capture because it allows them to offer an optimal organizational solution to their customers. Remote Remittance Capture enables the convenience of digitized remittance coupon recording, enhancing manageability for the user’s business,” said Terry Hilliard, SVP at Software Earnings, Inc.

Remote Remittance Capture is part of the ***First Touch iCapture*** product suite and will be available as a thin client version in the near future. The solution installs easily from the Web and adds updates automatically. Banks can monitor their RRC users’ activity through the RRC control center. For more information on Remote Remittance Capture, contact Terry Hilliard at (901) 322-9229.
